

MSW 9000

DXT 9000 MONITORING SOFTWARE

DESCRIPTION

MSW 9000 is a monitoring software exclusively dedicated to DXT 9000 Voice Alarm system offering system's real-time monitoring through web interface and SMS notification manager (external service). Connecting thorough a web browser to the IP address of a master unit (stand alone or part of a multi-master system), it is possible to access system's real-time interface that shows alert/emergency events in progress and active faults on each unit, grouped by categories. The main screen (Dashboard) presents a synthetic view of each master unit in the system, and offers the possibility to access each specific section (Details), with all sub-system detailed information. From the Details page, it is also possible to download the log of events and faults.

FEATURES

- Real-time system monitoring
- Alert/emergency events and faults signalling
- Downloadable events and faults log
- SMS notification manager
